

# THE FASTEST DISSOLVING FERTILIZER YOU CAN BUY!

DEVELOPED FOR GOLF COURSES, NOW AVAILABLE FOR YOUR LAWN

## APPLY

Using a clean, properly adjusted spreader, apply the material evenly. A drop-type or broadcast-type spreader may be used.

## WATER

Watering in this product will disperse each granule into thousands of particles and move the particles to the root zone. This will eliminate paw and shoe pickup.

## PLAY

Water thoroughly as directed and it is safe for your pets and children to resume activities in the yard!

LAWN FERTILIZER™

# WHAT MAKES PET SAFE LAWN FERTILIZER SAFE FOR MY PETS?

Pet Safe Lawn Fertilizer granules dissolve into millions of micro-particles when exposed to water, sending the fertilizer directly to your lawn's root zone and away from the paws and feet of your loved ones.

## IS PET SAFE LAWN FERTILIZER SAFE FOR ALL PETS?

When used as directed, yes. However, it may be toxic to aquatic life and should not be used in or near ponds or streams. Note: Pet Safe Lawn Fertilizer is not safe for consumption by pets or children.

## HOW DOES PET SAFE LAWN FERTILIZER COMPARE TO OTHER FERTILIZERS?

Pet Safe Lawn Fertilizer's main point of difference is the level of safety it provides. While most fertilizers require you to wait 24-48 hours or more after application before returning to outside activities on your lawn, Pet Safe Lawn Fertilizer allows you to return to using your lawn immediately after watering the product in as directed.

## IS IT SAFE FOR MY KIDS TO WALK AND PLAY ON AFTER APPLICATION?

After following the directions for watering Pet Safe Lawn Fertilizer into your lawn, it is safe for children and pets to resume activities!

## IS PET SAFE LAWN FERTILIZER "NATURAL" OR "ORGANIC"?

While it is not "organic," Pet Safe Lawn Fertilizer is produced from naturally-occurring minerals and nutrients.

## WILL PET SAFE LAWN FERTILIZER KILL WEEDS AND CRABGRASS?

No, as this is a high-performance fertilizer product, not a weed-killer. However, thickening your lawn with Pet Safe Lawn Fertilizer will slow the development of weeds and crabgrass.

## DO ALL FERTILIZERS DISSOLVE QUICKLY AFTER WATERING?

No. Current fertilizers on the market are not designed to disperse as quickly as Pet Safe Lawn Fertilizer. With these other products, granules may remain on the soil surface several weeks after application.

## HOW LONG WILL MY LAWN STAY GREEN?

Properly applying Pet Safe Lawn Fertilizer to your lawn will provide up to 12 full weeks of feeding.

## HOW OFTEN DO I NEED TO APPLY PET SAFE LAWN FERTILIZER?

Due to the high amount of slow release nitrogen in the product, we recommend applying Pet Safe Lawn Fertilizer every 8-12 weeks.

## WILL MY LAWN SERVICE COMPANY APPLY PET SAFE LAWN FERTILIZER FOR ME?

Contact your local lawn service company for more information.

## DOES PET SAFE LAWN FERTILIZER CONTAIN PHOSPHORUS?

No. Pet Safe Lawn Fertilizer is a phosphorus-free product.

## WHERE IS PET SAFE LAWN FERTILIZER MADE?

Pet Safe Lawn Fertilizer is proudly made in the United States.
